Selected Research Projects

2024 **Automatic Tracing in Task-Based Runtime Systems** *with Michael Bauer, David Broman, Michael Garland, Alex Aiken, Fredrik Kjolstad*
Developed dynamic program analyses to automatically apply the tracing optimization in task-based runtime systems, enabling significantly reduced runtime overhead at scale in complex distributed applications.

2023 **Composing Distributed Computations Through Task and Kernel Fusion** *with Michael Bauer, Shiv Sundram, Wonchan Lee, Michael Garland, Alex Aiken, Fredrik Kjolstad*
Developed dynamic program analysis techniques to fuse computations across library boundaries on distributed machines, enabling applications built through the composition of high-level libraries to approach the performance of hand-written code.

2022 **Legate Sparse** *with Michael Bauer, Wonchan Lee, Manolis Papadakis, Melih Elibol, Michael Garland*
Developing `legate.sparse` a distributed and GPU-accelerated drop-in replacement for `scipy.sparse`, enabling supercomputer scale performance from high-level Python code.

2021-2022 **Compiling Tensor Computations to Supercomputers** *with Fred Kjolstad, Alex Aiken*
Developed DISTAL, a compiler for sparse and dense tensor algebra that targets distributed systems.

2020 **Automated Mapping of Computation and Data** *with Alexandra Henzinger, Thiago Teixeira, Alex Aiken*
Developed system to automatically discover strategies for mapping computation and data onto different processors and memories in a heterogenous system.

2018-2019 **Disentanglement** *with Sam Westrick, Umut Acar*
